

- We are proud to offer:
- Competitive Pricing
  - 24 / 7 Emergency Coverage

# OMEGA® Elastomeric Couplings

## OEM Performance and Coverage

The unique split-in-half flex element and reversible hubs significantly reduce total costs by reducing inventory and assembly time. Rex® Omega® couplings are non lubricated, material-flexing couplings utilizing a specially formulated

polyurethane material engineered for maximum durability, strength and fatigue resistance. The Rex® Omega® HSU coupling (green) is specifically designed for hot and humid conditions. Rexnord is the leading coupling provider in the industry with a full-line

of available solutions supported by trained customer service and application engineering professionals focused only on our coupling product line. For more information, contact your local Rexnord sales representative.

# Features & Benefits

Rex® Omega® couplings operate in either horizontal or vertical applications without any additional components. Ease of installation, ease of maintenance, and visual inspection make these couplings a must for many applications such as this mash cooker in a brewery.

- Split-in-half flex element design for simplified assembly and disassembly
- Interchangeable hubs allow for reduced inventory
- High misalignment capacity accommodates unavoidable misalignment with low reactionary forces
- Torsionally soft flex element cushions shock loads and vibration extending equipment life
- Polyurethane flex element does not require lubrication
- Polyurethane-to-metal bond eliminates assembly and slippage problems associated with mechanically clamped designs
- Our selection software makes choosing the right coupling a snap
- Rexnord field specialists are locally based experts available to support key end-users
- The Omega® HSU coupling (green) is specifically designed for hot and humid environments. In addition, the HSU material performs well in caustic and acidic environments. Consult Rexnord engineering for your application.
